

JavaScript Calculator Thought Note

Overview:

This JavaScript calculator project is about simple yet functional web-based calculator, using combination of HTML, CSS, and JavaScript.

Key Elements:

1. HTML :

- Used HTML with sections for number inputs, operator selection, calculation button, and result display.

2. Styling with Bootstrap:

- Applied Bootstrap for responsive design and a visually appealing interface.
- Customized background colour and margin settings

3. JavaScript Logic:

- Developed a calculate function for performing calculations based on user inputs.
- Implemented a switch statement to handle different operators

4. External Libraries:

- Added external libraries contribute to a smoother user interface and improved design.
